

<b>Name:</b> Baltazar, Paul Eimar R.	<b>Date Performed:</b> Nov 6, 2024
<b>Course/Section:</b> CPE 212 - CPE 31S2	<b>Date Submitted:</b> Nov 6, 2024
<b>Instructor:</b> Engr. Robin Valenzuela	<b>Semester and SY:</b> 1st Sem 2024-2025
<b>Midterm Skills Exam: Install, Configure, and Manage Log Monitoring tools</b>	
<b>1. Objectives</b>	
Create and design a workflow that installs, configure and manage enterprise availability, performance and log monitoring tools using Ansible as an Infrastructure as Code (IaC) tool.	
<b>2. Instructions</b>	
<ol style="list-style-type: none"> <li>1. Create a repository in your GitHub account and label it CPE_MIDEXAM_SURNAME.</li> <li>2. Clone the repository and do the following: <ol style="list-style-type: none"> <li>2.1. Create an Ansible playbook that does the following with an input of a config.yaml file and arranged Inventory file:</li> <li>2.2. Install and configure Elastic Stack in separate hosts (Elastic Search, Kibana, Logstash) • Install Nagios in one host</li> <li>2.3. Install Grafana,Prometheus and Influxdb in seperate hosts (Influxdb,Grafana,Prometheus)</li> <li>2.4. Install Lamp Stack in separate hosts (Httpd + Php,Mariadb)</li> </ol> </li> <li>3. Document all your tasks using this document. Provide proofs of all the ansible playbooks codes and successful installations.</li> <li>4. Document the push and commit from the local repository to GitHub.</li> <li>5. Finally, paste also the link of your GitHub repository in the documentation.</li> </ol>	
<b>3. Output (screenshots and explanations)</b>	
<p>Create a repository in your GitHub account and label it CPE_MIDEXAM_SURNAME.</p> <p><a href="https://github.com/rpldpaul/CPE_MIDEXAM_Baltazar">https://github.com/rpldpaul/CPE_MIDEXAM_Baltazar</a></p> 	

Clone the repository and do the following:

Create an Ansible playbook that does the following with an input of a config.yaml file and arranged Inventory file:

The image shows two screenshots of a terminal window. The top screenshot shows the 'inventory' file in nano editor with the following content:

```
[ubuntu]
192.168.56.106
[centos]
192.168.56.109
```

The bottom screenshot shows the 'ansible.cfg' file in nano editor with the following content:

```
[defaults]
inventory = inventory
remote_user = paul_eimar
host_key_checking = True
```

- 5.1. Install and configure Elastic Stack in separate hosts (Elastic Search, Kibana, Logstash) • Install Nagios in one host

midexam.yml (main playbook)

```
---
- name: Install Elasticsearch
  hosts: centos, ubuntu
  become: true
  roles:
    - elasticsearch
    - elasticsearchubuntu

- name: Install Kibana
  hosts: ubuntu

```

The screenshot displays the Nagios Core 4.5.6 web interface. At the top, the Nagios logo and version information are shown, along with a status message indicating the daemon is running with PID 13362. The interface includes a sidebar with navigation links for General, Current Status, Reports, and System. The main content area features sections for 'Get Started' (with links to start monitoring, change look and feel, and extend Nagios), 'Quick Links' (with links to Nagios Library, Nagios Labs, Nagios Exchange, Nagios Support, Nagios.com, and Nagios.org), 'Latest News', and 'Don't Miss...'. A 'Page Tour' button is located on the right side of the interface.

5.2. Install Grafana,Prometheus and Influxdb in separate hosts (Influxdb,Grafana,Prometheus)

5.3. Install Lamp Stack in separate hosts (Httpd + Php,Mariadb)

MariaDB (Ubuntu)
